

Manifesto of Com Quantum Theory

X. D. Dongfang

*Orient Research Base of Mathematics and Physics,
Wutong Mountain National Forest Park, Shenzhen, China*

For more than a hundred years, a generation of theoretical physicist has put forward theories that were difficult to distinguish right from wrong in that era, but were essentially wrong, and gained enormous benefits. Erroneous theories have ascended the supreme altar and captured generations of faithful believers. They joined forces with unprecedented strength, vigorously promoted and developed erroneous theories, and gained more benefits and honor. They do their best to safeguard their vested interests, destroy great new discoveries, endlessly fake experimental phenomena, and write numerous myths and conjectures, whitewash fallacies, and even rob and conquer. Human scientific thought is constantly nibbled, academic journals are monopolized, media are manipulated, lies are flying, natural truth is distorted, scientific theory is strangled, academic morality is trampled, and human nature is destroyed. Theoretical physics has gradually become a scientific pretext for greedy people to swagger through the market and become a private tool for maximizing personal interests. People all over the world who pursue the true meaning of science are finally angry. They stood up, broke through the cage of thought, and tore up the veil that covered the ugly soul. At this time, the wind and clouds surged, and the common quantum theory was born. The macroscopic and microscopic quantized descriptions are unified, and the real face of nature is gradually presented. Henceforth, shameless slander will no longer be able to strangle new discoveries to be in the cradle. Theoretical physics will become a public property that reveals the secrets of nature. Great scientific ideas will always be shining like stars in the vast space.

Keywords: Special relativity; General relativity; Gravity theory; Quantum mechanics; Ordinary differential equations; Partial differential equations.

PACS number(s): 03.30.+p—Special relativity; 04. General relativity and gravitation (see also 95.30.Sf in astronomy); 03. Quantum mechanics, field theories, and special relativity (see also section 11 General theory of fields and particles); 02.30.Jr Partial differential equations.

The day is bright and the night is dark, the rain and snow are continuous, the west wind is sobbing, and the clouds are rolling. The scientific countryside garden of com quantum theory has experienced a long ice cover and bitter cold. When thunder starts to roar and makes the mountains tremble, how far can spring be from the coming day? One the dark clouds are far away and never to return, the warm sunshine will shine all over the world, the thousands of miles of snow and ice will melt, the thousands of miles of vegetation will recover, and the flowers will be blooming everywhere. The gentle wind, blowing from the ancient oriental civilization, gently caresses the wonderful scenery of nature and brings the fragrance of the deep valley orchid to every corner of the earth, calling for new physics people and stirring up the magnificent waves of natural science.

Computer's trillions of verifications can not prove Goldbach's conjecture and Fermat's last theorem after all, and the power of logical argumentation is irreplaceable or transcendent. Physics is a scientific theory that uses mathematical language to describe natural phenom-

ena and predict the laws of material movement. Mathematical deduction can be divided into correct deduction and wrong deduction. Only correct mathematical deduction of natural law can form scientific logic. Unfortunately, for a long time, because of the insatiable pursuit of fame and wealth, the false deduction disguised by the gorgeous formal mathematics has won the hegemony of the science palace, and the absurd and distorted causality has dominated the spiritual world. Physical theory needs the support of experimental observation. Historically, when people lacked sufficient knowledge of the natural law, the support or negation of some conjectures by experimental observation data once helped to correctly understand the natural law. Therefore, experimental observation has become the basis of physics and occupies an important position. However, the variability of experimental operation and the subjective tendency to interpret experimental results have created a large number of hegemonic speculators. Modern physical theories and experiments are full of a large number of lies, and the imagination of the empty world has mushroomed in

the direction of witchcraft. Fictitious strange seeking events and erroneous conclusions completely contrary to the laws of nature are always declared to have passed the test of numerous experimental observations due to the cover of the halo of cunning surface mathematical operations. Uncovering erroneous theories and untrue inferences has encountered unprecedented tremendous resistance. Unitary principle: the transformation results of logical deduction conclusions under different scales are consistent. This universal logical test principle is openly abandoned and destroyed, and the truth is trampled and killed. So, will the theoretical empire that uses lies to prove lies stand forever? Decadence of scientific spirit needs to be rescued by people who pursue truth one after another!

Physical inference must be tested by experimental observation, but experimental principle must be based on scientific logic. The experimental reports produced according to the expected purpose will eventually reveal their true colors in the powerful logic test. Two ideological realms of pursuing fame and wealth and pursuing truth determine the two opposing camps of the old physics people and the new physics people. The old physics people often deviated from the scientific norms, explained the experimental observation data based on personal wishes to confuse right and wrong, tampered with and fabricated the experimental data, and thus whitewashed unreasonable assumptions and erroneous inferences into scientific truth; the new physics people respects the original experimental data, looks for the local and overall logical self consistent scientific inference hidden in the experimental data, and never tampers with or generates the observation data in pursuit of personal fame and fortune to fabricate the experimental report. The laws presented by the limited experimental data are consistent with the theoretical inference, which is only a necessary condition for the establishment of the physical theory, but not a sufficient condition. The old physics people often evade the reliability of experimental data, create isolated and unrepeatable experimental data, and choose one of several contradictory explanations to praise the hypothesis and conclusion that the old physics lacks logical proof; the new physics people face up to the fact that the same experimental data can constitute a double argument of truth and fallacy, mercilessly expose the tricks of error analysis hide in lying experimental reports, discard all non scientific analysis methods of subjective choice, and propose that major physical experimental projects that cost a lot of money should be subject to extensive scientific demonstration. The old physics people often avoid the conclusion of complex scientific data analysis and render the signals similar to the expected ones as strange natural phenomena that do not actually exist; the new physics people uses the conclusions of scientific analysis to reveal the truth hidden in the observation data.

Physics is inseparable from mathematical deduction,

but physics is by no means a game of formal mathematics. The old physics people are intoxicated with the equations constructed by formal mathematics to concoct plausible and strange events, indulge in empty and wrong assumptions, reject the correct conclusions of logical argumentation and experimental observation and analysis, and take the actually untenable conjecture and sophistry as the basic principles of science, and they are keen on the popular science rendering of the new media, and often describe completely wrong inferences as strange natural landscapes; the new physics people abandons all formal mathematics and despise the behavior of fabricating expected conclusions for the purpose of achieving subjective goals, pursues the root of wrong assumptions based on isolated events, explores the inevitable causality behind complex phenomena, follows the basic principles of natural science theory, and consistently insists on describing the true natural laws with correct mathematical logic. The old physics people always reject major scientific discoveries from others, pretend to be indifferent to new scientific ideas, new scientific principles, new scientific theories and new scientific inferences but actually covet them, they are only obsessed with fame and power and are always in fear, and often maliciously slander new theoretical breakthroughs and kill new scientific ideas and new scientific discoveries; the new physics people advocate the highest moral standards, love the great nature, piously pursue the truth of natural science, abandon the art of sophistry in physical theory, overthrow the carefully fabricated experimental observation data and absurd distorted logic, whip the greedy, selfish and hypocritical human nature, promote the scientific spirit, critically inherit the old physics, eliminate its dross, absorb its essence, make use of its strengths and avoid its weaknesses, be modest and prudent, and don not take the fruits of others' labor by force and then try to dominate the world, nor do you seek ostentation by reversing right and wrong in order to win acclaim.

The new physics people embrace the great scientific ideal, calmly bear the indifference and oppression of the old physical world, take firm steps at the time of hardship, carry out the long march of one hundred years, open up a pure physics pastoral, work hard and unswervingly! An indestructible new physics building will rise. There, the money, honor, status and authority that are above the scientific truth disappear completely; there, the phenomenon of fabricating experimental data to cover up lies no longer exists, and the vanity and flashy of weaving formal mathematics disappear; there, fallacies and eloquence came to the end, and the code of natural science shines brightly!

You, gorgeous turn, be long in coming. Come on, please step into the beautiful countryside of com quantum science, wash away the dust of dark thoughts, and dedicate your wisdom to the noble scientific cause. You are a holy angel. Because of you, physical theory is no

longer an intangible tool to seek personal interests; Because of you, the magical and wonderful scene of nature is no longer distorted; Because of you, lies can no longer stain the sanctity of nature; Because of you, the spread

of scientific truth is like a long river running ceaselessly.
